How to Add a New Client

Who this is for: Anyone on the team helping bring on a new creator client.
What this covers: Everything from first conversation to the day they go live — what you need from them, what we do internally, what they get, and what they're responsible for.

The Big Picture

We are a **fully managed AI texting service** for comedians and creators. When we take on a client:

- Their fans text a phone number and get back replies that sound exactly like them
- They get a private dashboard to see their audience, run live show signups, and send mass texts
- We own and run everything behind the scenes — hosting, AI, phone infrastructure, fan database
- They never touch a server, never manage software, never think about any of it

Our job is to make it look effortless on their end.

Phase 1 — Before You Sign Them

What to confirm before committing

Make sure you can answer yes to all of these before moving forward:

- ☐ Do they have an active audience? (Touring comics, podcasters, YouTubers with real fan engagement — not someone just starting out)
- ☐ Do they have existing content we can train the AI on? (At least one of: a YouTube channel, a podcast, a special, a book)
- ☐ Are they willing to publish an SMS privacy policy and terms on their website? (This is legally required for SMS marketing — they must do this)
- ☐ Are they willing to be the one who approves every mass text before it goes out? (We send it, but they sign off on the content every time)
- ☐ Have they confirmed their existing subscriber list (if any) has valid opt-in consent? (If they're importing old contacts, those fans must have agreed to receive texts)

Phase 2 — What to Collect From the Client

This is your intake. You need all of this before we can start building anything. Send them a simple request list.

Their Content (for training the AI)

The AI learns from their real material. The more we have, the better it sounds like them.

Content Type	What to Ask For	Priority
YouTube channel	Link to their YouTube page, or specific video links	High

Content Type	What to Ask For	Priority
Podcast	Name of the podcast or RSS feed link	High
Stand-up specials	Any video links or transcript files	High
Book	PDF of the book, or a link	Medium
Written work	Newsletter, Substack, articles, blog posts	Medium
Instagram / TikTok	Links to their profiles	Low

> **Minimum to launch:** They need at least one high-priority source above. Ideally two or more. The AI will sound thin with very little material.

Their Voice (for writing their AI personality)

We write the AI personality ourselves after studying their material — but it helps to hear it from them directly too. Ask them:

1. **How would you describe your comedy style in 2-3 sentences?** (Example: "I'm the sharp, Indian-immigrant mom who tells the truth your family won't.")
2. **What topics are completely off-limits?** (Example: a past relationship, a pending legal matter, a family member who's passed away)
3. **What are 5-10 phrases you actually use with fans?** (DMs, comments, replies — real stuff, not what they think they'd say)
4. **Who is the AI talking to?** (Who is a typical fan — age, vibe, why they follow this creator)

Their SMS Setup

Item	What to Ask	Notes
Do they have a SlickText account?	Yes / No	If yes, we need the API key. If no, we create one.
What keyword do they want?	A word fans text to subscribe	Should match their brand. Example: ZARNA, SARAH, FUNNY
Do they have an existing subscriber list?	Yes / No	If yes, we need the file AND their confirmation that consent is valid
What phone number do they want to text from?	Their preference	We handle getting it — just need to know if they have a preference

Their Legal Items (they must do this themselves)

We cannot launch without these in place. These are their responsibility, not ours — but we need to confirm they exist before going live.

- ☐ **Privacy Policy** — published on their website, covers SMS data collection
- ☐ **SMS Terms of Service** — explains message frequency, how to opt out (STOP), that messages are automated

- ☐ **Confirmation that existing subscriber consent is valid** — if they have an existing list

> **Who writes these?** They do, with their own legal counsel. We can point them to the compliance overview in `docs/sms_compliance_sections.md` as a reference. We do not write their legal documents.

Phase 3 — What We Do Internally

This is all Brij / the technical team. The rest of the team doesn't need to do any of this — just know what's happening and roughly how long it takes.

3A. Set Up Their Client Folder (~15 minutes)

We create a client record in our system:

- Copy the client template in `clients/template/` → `clients/[their name]/`
- Fill out their info: who they are, what content we have, deployment notes
- Copy the voice config template → `creator_config/[their name].json`

3B. Ingest Their Content (~30 minutes, mostly automated)

We run scripts that pull in all their content — YouTube videos, podcast episodes, specials, book. The scripts do the heavy lifting. At the end we have a knowledge base file that contains everything the AI knows about them.

3C. Write Their Voice Config (~2 hours, this is the craft work)

This is the most important step. We watch/read their material and write the AI's personality guide — their energy, what angles they take, how they handle emotional fan messages, what they never say. This is what makes the AI sound like *them* instead of a generic bot. It takes real care to get right.

3D. Deploy Their System (~30 minutes)

We spin up a fresh copy of our platform on Railway (our hosting provider) pointed at their configuration. They get:

- Their own AI texting system connected to their phone number
- Their own private dashboard at a URL we give them
- Their own isolated database — their fan data never touches another client's

3E. Test (~1 hour)

We text their number 20+ times pretending to be a fan. We test normal fan messages, edge cases, their specific topics, the keyword signup flow, the STOP/unsubscribe flow. When it passes our QA, we hand it to the creator.

3F. Creator Signs Off

The creator texts the number themselves. They decide if it sounds like them. We do not go live until they say yes. **Get that approval in writing — a Slack message or email is fine.**

Phase 4 — Going Live

What "going live" means

- The keyword is announced publicly (at a show, on Instagram, in a newsletter, wherever)
- Fans start texting
- The AI starts responding
- The dashboard is active

Launch options

Launch Method	Best For
Announce at a live show	Immediate surge — 200-500 new subscribers in one night
Post keyword on Instagram / TikTok	Gradual rollout over days
Email newsletter	Existing email list converting to SMS
All at once	Use all three together for maximum impact

What we monitor at launch (first 48 hours)

- Are texts coming in and getting replied to?
- Are there any AI errors showing up in logs?
- Are the replies sounding right?
- Is the keyword signup working?

Phase 5 — Ongoing

What the client does after launch

Task	How Often	Where
Check their dashboard (subscriber count, engagement)	Whenever they want	Their dashboard URL
Create a new live show for an upcoming event	Before each show	Dashboard → Shows
Send a mass text to their audience	Whenever they want	Dashboard → Blast
Download their subscriber list	As needed	Dashboard → Audience

What we do after launch

Task	How Often	Who

Task	How Often	Who
Monitor for AI errors or unusual behavior	Ongoing (automated)	Brij
Add new content when they release something new (new special, new podcast episodes)	When they release it	Brij
Update their voice config if they flag something is off	As needed	Brij
Renew/manage hosting and SMS accounts	Monthly	Brij

What the client should tell us about

- They released a new special, new episodes, a new book → we need to update the AI
- A fan sent something concerning (threat, mental health crisis) → we review conversation logs
- Something feels off about how the AI is responding → we fix the voice config
- They want to add a team member to the dashboard → we create a login for them

---

Timeline Summary

From signed contract to live:

Phase	Who Does It	Time Needed
Collect content + intake form	Client (with your help)	1-3 days
Write voice config	Brij	2 hours
Ingest content + build AI	Brij	1-2 hours (mostly automated)
Deploy system	Brij	30 minutes
Test + QA	Brij	1 hour
Creator signs off	Creator	Same day, usually
Total from intake to live		**3-5 business days**

> The client's speed on providing their intake is usually the longest part of the timeline.

What We Control vs. What They Control

We own and run

- Everything technical (hosting, AI, database, SMS infrastructure)
- Their training data and knowledge base
- All security and credentials
- Uptime and reliability

They control (through their dashboard)

- Creating live show events and choosing keywords
- Writing and sending mass texts (they write it, we send it — they must confirm before every send)
- Viewing their audience and conversation history
- Downloading their subscriber list

They are solely responsible for

- Their privacy policy
- Their SMS terms of service
- The validity of their subscriber consent
- Any legal matters involving their content or fanbase

If Something Goes Wrong

Situation	What to Do
AI gives a weird or off-brand reply	Note the fan's number and approximate time, send to Brij to review
Mass text went to wrong audience	Contact Brij immediately — do not send anything else
Client can't log into dashboard	Send to Brij — he resets the login
Fan is texting something concerning (threats, crisis)	Flag to Brij — he can pull the conversation log
Client wants to pause the AI temporarily	Contact Brij — this is a settings change on our end
Fan complains they can't unsubscribe	Tell them to text STOP — the system handles it automatically

---

Quick Reference Card

Before signing a client:

> Confirm they have content, an audience, and are willing to handle their own legal compliance.

What we need from them:

> Content links + voice description + SMS keyword + privacy policy confirmation.

What we do:

> Ingest content → write their AI voice → deploy their system → test it → hand it to them.

Timeline:

> 3-5 business days from complete intake to live.

After launch:

> We monitor and maintain. They log in to their dashboard and run their audience.

Last updated: April 2026. For questions about any step, contact Brij.
